

ARCUS

New Features

March 19, 2019

New Tools Area

The Dispatch block has gained a new area—the Tools area! Our first feature in this area is the Carrier Lane Search. You will recognize this as the same tool available in the Load Create/Maintenance screen, but now it is available outside of that screen.

New branches will need to remember that as they enter more loads into the system, their load history will grow and the tool will become more robust for them.

Equipment Type Added To Load Tracking

Equipment type information is now added to the Load Tracking screen under the Loads tab.

Mileage Between Stops on Order Maintenance

Miles between stops has been added to the Order Create/Maintenance screens.

Rate Decimals Extended

Dollar amounts in the Bill Rate and Pay Rate fields has been extended to 3 decimal places. These fields are found in the Order Create/Maintenance screens.
